

Kipcon Inc. Introduces A New Division: Energy Squared, LLC.

NORTH BRUNSWICK, NJ (April 6, 2009) - Kipcon Inc., who has led the multifamily residential industry for over 25 years with cost effective solutions for a wide variety of engineering problems, is proud to introduce a new division of the company that will focus on energy and sustainability. Energy Squared, LLC is a full-service energy design consultant firm that offers Mechanical, Electrical and Plumbing designs and specifications, building performance modeling and energy simulations as well as feasibility studies for sustainable energy systems, paying particular attention to life cycle costs.

The team at Energy Squared, LLC is comprised of Professional Engineers, Licensed Inspectors and Sustainable Design and Energy Professionals. Our experts include United States Green Building Council Leadership in Energy and Environmental Design Accredited Professionals (LEED APs), National Association of Home Builders Certified Green Professionals (CGPs) and Building Performance Institute Professionals (BPIs).

Our engineers have over fifty years of combined experience providing energy conservation and sustainability design services for all types of commercial, retail and residential high, mid and low rise buildings both in the United States and internationally. With multiple published articles, design awards and speaking engagements around the world, our professionals are recognized for their expertise in energy efficient, sustainable design engineering.

Serving a wide range of clients, including multifamily residential facilities, developers as well as commercial and industrial property owners, the end-to-end solutions provided by Energy Squared reflect the latest in sustainable techniques and innovative technologies. Providing building envelope assessments, MEP design services and renewable energy evaluations for new construction and/or retrofitting projects, our team's broad range of expertise and experience enables them to engineer projects into cost-effective and energy-efficient solutions. From the initial energy audit through to project completion and obtaining the applicable rebates and incentives, Energy Squared will optimize the designs and expedite each step of the process.

"I'm so excited about the creation of Energy Squared," said Mitchell H. Frumkin, PE, CGP, President of Kipcon Inc. "The combination of Kipcon's building and inspection experience along with the sustainability design background of Energy Squared's staff puts the new company in a unique position to substantially enhance building performance by optimizing the energy systems for all types of facilities."
